

Did you know...

## Hopland Research and Extension Center

- The number of oak trees in California is declining in part because seedlings are eaten by deer or other herbivores.
- Over half of the 21 species of oak trees found in California grow at Hopland
- Large and old oak trees at Hopland provide important nesting habitats for turkey vultures.

To learn more about oaks and other resources studied at the Hopland Research and Extension Center, please visit the Center's website.
